

## Exercise:

In the json file you have data on Netflix Titles. The goal is to do exploratory data analysis (EDA)

in order to understand what type of information we can extract from the dataset.

The dataset contains the following columns:

- Show\_id
- Type
- Title
- Director
- Cast
- Country
- Data\_added
- Release\_year
- Rating
- Duration
- Listed\_id
- Description

The exercise is supposed to be done in python but other than that you are free to use which libs you want.
